

## **ProTekTor+ FCC 15B certification**

08/22/00

ProTekTor+

All firmware versions

The ProTekTor+ mini-monitor from PageTek has been recently certified to meet FCC Part 15B requirements. Certifying the ProTekTor+ to the more rigid B residential requirements ensures that the ProTekTor+ may be used in virtually any environment without fear of interference to sensitive receiving equipment.

Part 15 of the Federal Communications Commission standards seeks to ensure that no Information Technology equipment emits radio frequency radiation that might interfere with sensitive equipment that might be located nearby. While equipment marketed to the commercial and industrial markets are required to meet the less stringent 15A standards, type B acceptance is normally required only for products marketed to the residential market.

The ProTekTor+ is presently undergoing UL safety and FCC Part 68 testing, which will provide users with further confidence in this outstanding small monitor from PageTek.
